SHURCHI: A TERRITORY WITH A MODERN FACE

Nigina Shoeva
Head of the Information Service of the
Shurchi District Administration

As in all regions of the Republic of Uzbekistan, large-scale work is being carried out in Shurchi district of Surkhandarya region aimed at improving the living standards of the population, forming modern infrastructure, and ensuring comprehensive territorial development. The consistent implementation of all activities based on clear programs and defined plans is yielding tangible results.

In accordance with the Decree No. 11 of the President of the Republic of Uzbekistan dated January 27, 2025, special attention is being paid to the construction of multi-storey residential buildings in the district in 2026. At present, construction and installation works in these buildings are being carried out at a rapid pace in accordance with established procedures.

In particular, as a result of accelerating urbanization processes, modern apartment buildings are being constructed in the “Bo‘ston”, “Do‘stlik”, and “Oqkamar” mahallas of the district. A total of 5 multi-storey buildings consisting of 213 apartments, with a total area of 4,140.6 square meters, are being built as 5-, 7-, and 9-storey structures.

These projects are of great importance in ensuring efficient and economical use of land resources and meeting the population’s housing needs. At the same time, modern infrastructure solutions and energy-efficient technologies are widely being implemented in the buildings under construction.

Most importantly, such construction works serve to create more comfortable living conditions for the population, modernize the architectural appearance of the district, and contribute to its socio-economic development.

Work on the development of social and production infrastructure in the district is also continuing steadily. In this regard, the Decree of the President of the Republic of Uzbekistan dated December 24, 2024, No. 393, “On measures for the development of social and production infrastructure of the Republic of Uzbekistan for 2025–2027,” serves as an important programmatic basis.

According to this decree, in 2026 it is planned to construct, reconstruct, overhaul, and modernize a number of social facilities in the district, and practical implementation of these works is currently underway.

In the field of education, major projects are being implemented. In particular, an additional 210-seat building is being constructed at School No. 19. A new 300-seat building is also being built for School No. 37. In addition, construction of a 240-seat additional educational building is underway at School No. 69.

In the healthcare sector, special attention is also being paid to improving services. Reconstruction works are being carried out at the building of the “Surxon” branch of Family Polyclinic No. 90, which will further improve the quality of medical services provided to the population.

These projects are important in creating modern educational and healthcare facilities for the population and improving their living standards.

Measures aimed at ensuring public safety, welfare, and further improving infrastructure are being implemented step by step in the district.

In particular, special attention is being paid to strengthening the eroded right bank of the “Surkhandarya” river flowing through the “Katta Savur” mahalla. At present, practical work is being carried out according to a plan-schedule to protect against floodwaters along a 600-meter section of the river. This plays an important role in ensuring the safety of the local population.

At the same time, road infrastructure development is being consistently carried out in accordance with Presidential Decree No. 665. In particular, 8.9 kilometers of internal roads have been paved with asphalt in the “Do‘stlik”, “Go‘zallik”, “Oliyhimat”, “Shaldiroq”, “Egarchi”, and “To‘la” mahallas.

It should be noted that in 2025, large-scale works were also carried out. In particular, 72 kilometers of internal roads were gravelled, and pedestrian walkways were built over 8 kilometers.

Significant results were also achieved in the utilities sector. In particular, 45 kilometers of drinking water networks were laid. To improve electricity supply, 1,330 outdated poles were replaced with reinforced concrete supports, 42.5 kilometers of overhead power lines were converted to modern insulated cables, and 12 new transformers were installed.

In addition, 75.6 kilometers of internal streets were asphalted, of which 53 kilometers were through community efforts, and 22.6 kilometers were implemented under Presidential Decree No. 665.

These ongoing works contribute to the socio-economic development of the district and create a more comfortable and safe living environment for the population.

During the first quarter of 2026, large-scale work continued to be carried out to improve living standards, modernize engineering and communication networks, and beautify the territory.

Within the framework of Presidential Decree No. 665, special attention was first given to improving road infrastructure. In particular, 6.6 kilometers of internal roads were fully asphalted, ensuring convenient and safe movement for residents.

In addition, repair works were carried out on 27 kilometers of international highways. Within this project, 1 kilometer of new asphalt was laid and pedestrian walkways were built over 3.5 kilometers. This contributes not only to traffic efficiency but also to pedestrian safety.

Significant work was also carried out in the utilities sector. In particular, 18 kilometers of drinking water pipelines were laid, and 3 modern energy-efficient pumps were installed, improving access to clean drinking water.

To ensure stable electricity supply, outdated infrastructure is being gradually upgraded. In particular, 180 old poles were replaced with reinforced concrete supports, and 2.5 kilometers of overhead lines were converted to modern insulated cables. In addition, 16 transformers were repaired, improving the quality of electricity supply.

In the district center, 64 illegally constructed buildings that did not comply with urban planning regulations were demolished. These measures contribute to improving the architectural appearance of the area and ensuring order.

Furthermore, in accordance with Presidential Decree No. 387, measures were taken to ensure the financial stability of beautification departments. A modern parking area was established on 0.97 hectares of reserve land belonging to the district administration.

Overall, the large-scale works being carried out in Shurchi district serve to enhance its socio-economic potential, form a modern appearance, and create a solid foundation for improving the well-being of the population.
