Kalit so`zlar: xorijiy tillar, akademik ta`lim, til bilish mahorati, akademik muvaffaqiyat, talabalar imkoniyatlari, ko`p tillilik.

Introduction.

In an increasingly interconnected world, the ability to speak and understand different languages plays an indispensable role. If students want to share culture, attitudes, knowledge and experiences they have to know at least one foreign language. It helps them to communicate and to have good relations for their own career paths. To sum up it opens a myriad of opportunities, both academic and personally.

Benefits of Foreign Languages learning

1. Developing resilience.

The main advantage is to develop resilience, because every language has its own challenges and differences especially in pronunciation. But if students have motivation and desire to learn they can find patience and fill their time with enjoy.

2. Enhancing cognitive abilities.

Furthermore, research has consistently shown that learning foreign language can improve cognitive abilities. Students who study languages tend to have better problem-solving skills, high levels of creativity and enhanced memory.

3. Benefits for heritage speaker`s wellbeing.

Maintaining and developing a heritage language provides significant for students overall wellbeing. Studies show that heritage language learning supports socio-emotional development by fostering a sense of belonging. It influences cultural connections with relatives, families and friends which are vital for emotional stability. It is better to have great proficiency in heritage language because it reduces a sense of social isolation and helps to fit cultural roots and community.

While foreign language learning offers numerous social, emotional advantages, its effect on academic achievement is particularly noteworthy.

Firstly, learning foreign languages promotes the development of cognitive skills. Research shows that children who learn second language perform better results in logical thinking, problem solving, and creative thinking tasks. Learning a language requires students to memorize new words, grammatical rules, and syntax, which helps improve memory, and concentration. And also scientists note that bilingual children show greater flexibility and adapt better to changes in the environment. [1]

Secondly, children who study foreign languages often show the best results in subjects such as mathematics, science, and literature. This is because while learning foreign language they develop analytical skills that are effect to other academic disciplines. Moreover, as students understand different languages they have an access to learn the topic better from a number of materials, sources.

After learning academic influences, it is important to explore the personal advantages that students can obtain.[2]

Obviously, when students see that they can overcome challenges and learn new languages, they feel more confident in their abilities and they start to believe themselves. The ability to communicate in a foreign language can also become an important skill for future career. As we know, graduating with the ability to speak several languages may open more employment opportunities, especially in international companies. In addition, when students start to compare languages they develop critical thinking. This can be really effective if they will analyze with their native languages. Learning foreign languages also helps to develop multitasking skills. Because of the reason that bilingual people used to deal with two or more languages at the same time, for them it is easy to quickly switch from one activity to another one. Also it is greatly shown that for example if students understand French, they will learn about customs,

traditions, cultural differences and history. Knowledge of foreign language helps to overcome cultural barriers and promotes more effective interaction between people from other nations. [3]

The role of Major Foreign Languages in Academic Achievement.

In addition to general academic and personal benefits, proficiency in specific foreign languages such as English, German, French, Turkish, plays crucial role in enhancing students` academic success.

These languages are widely used in international academic resources, scientific publications, and online educational platforms. Moreover, proficiency in foreign languages also opens door to various scholarships and international academic programs. Many universities and organizations require applicants to demonstrate language skills, and to participate in exchange programs, research projects, or internship abroad. Students who master these languages have greater access to funding opportunities, international workshops, and collaborative projects. This also increases their competitiveness in the global educational environment.[4]

Learning foreign languages can be an exciting and enjoyable activity. Many students find pleasure in learning new words, watching movies and reading books in the language they are learning. As it helps to make the learning process more interesting and motivating.

CONCLUSION

Learning foreign languages at school brings many benefits that positively affect the cognitive, academic, social and personal development of students. Proficiency in foreign languages opens up new educational and career opportunities, as well as develops creativity and makes the learning process more interesting. And also it promotes the development of cognitive skills, academic achievement, social skills, self-confidence, and critical thinking.
