***Abstract.*** *This article analyzes the theoretical and practical aspects of using interactive pedagogical technologies in the process of teaching English. The study highlights the role of interactive methods in developing students' communicative competence, fostering independent and critical thinking, and increasing learners' engagement in the classroom. In addition, based on the requirements of modern education, the types of interactive methods applied in English language teaching, as well as their advantages and effectiveness, are scientifically evaluated. The article substantiates that interactive approaches, in comparison with traditional teaching methods, serve as an important factor in improving the quality of education.*

***Keywords:*** *English language, interactive methods, pedagogical technologies, communicative competence, educational effectiveness, learning process, modern education, student engagement.*

# ZAMONAVIY INGLIZ TILI TA'LIMIDA INTERFAOL METODLARNI QO'LLASHNING PEDAGOGIK ASOSLARI

***Annotatsiya.*** *Mazkur maqolada ingliz tilini o'qitish jarayonida interfaol pedagogik texnologiyalardan foydalanishning nazariy va amaliy jihatlari tahlil*

*qilinadi. Tadqiqotda interfaol metodlarning o‘quvchilarning kommunikativ kompetensiyasini rivojlantirish, mustaqil va tanqidiy fikrlashini shakllantirish hamda dars jarayonidagi faolligini oshirishdagi o‘rni yoritib beriladi. Shuningdek, zamonaviy ta’lim talablaridan kelib chiqqan holda ingliz tili darslarida qo‘llaniladigan interfaol usullarning turlari, ularning afzalliklari va samaradorligi ilmiy asosda baholanadi. Maqolada interfaol yondashuvlar an’anaviy ta’lim usullariga nisbatan ta’lim sifatini oshirishga xizmat qiluvchi muhim omil ekanligi asoslab beriladi.*

***Kalit so‘zlar:*** *ingliz tili, interfaol metodlar, pedagogik texnologiyalar, kommunikativ kompetensiya, ta’lim samaradorligi, o‘quv jarayoni, zamonaviy ta’lim, o‘quvchi faolligi.*

**Introduction.** In the modern education system, the process of teaching foreign languages, particularly English, is undergoing significant changes in both content and form. Globalization, the rapid development of information and communication technologies, and the expansion of international communication have turned English language proficiency into an essential social necessity. Therefore, alongside traditional teaching methods, the application of interactive pedagogical technologies that ensure learners’ active participation and independent thinking has become a pressing issue in English language education.

Interactive teaching methods transform learners from passive recipients of knowledge into active participants in the educational process. Through these methods, classroom activities foster communication, collaboration, problem-solving, and the development of creative thinking skills. In particular, interactive approaches in English language teaching play a crucial role in activating learners’ speech activity, expanding vocabulary, and developing communicative competence.

Today, improving the quality of education is determined not only by the professional competence of teachers but also by the effective use of modern educational technologies. From this perspective, the scientific analysis of the role and effectiveness of interactive pedagogical technologies in English language classes, as well as the identification of their practical implementation opportunities, is considered one of the key tasks.

This article examines the pedagogical foundations of using interactive methods in the process of teaching English, their significance in developing learners' knowledge, skills, and abilities, and their role in enhancing the overall effectiveness of education.

In the modern educational process, one of the primary responsibilities of the teacher is to create a supportive pedagogical environment that enables each learner to acquire a foreign language in a practical manner. In English language teaching, interactive pedagogical technologies serve precisely this purpose, functioning as effective tools for fostering learners' activity, creativity, and independent thinking. The teaching methods selected by the teacher should ensure learner-centered instruction by taking into account each student's individual abilities and level of learning.

The application of interactive methods in the process of teaching foreign languages activates learners' cognitive activity. Cooperative learning, project-based methodology, the use of information and communication technologies, and the integration of Internet resources into classroom practice enable the individualization and differentiation of instruction. Through these technologies, learners' speech competence, creative thinking, and communicative skills are effectively developed.

In English language classes, the use of computers and digital educational resources yields high results in the following key areas: vocabulary development, pronunciation practice, the enhancement of dialogic and monologic speech, the formation of writing skills, and the consolidation of

grammatical knowledge. A significant advantage of computer-based technologies is that they encourage learners to acquire knowledge in a comfortable, pressure-free, and individualized pace, which makes the learning process more effective and motivating.

The use of Internet resources significantly expands the didactic possibilities of English language teaching. Through the global network, learners gain access to authentic texts, up-to-date information, and materials from foreign mass media. This process not only develops reading, writing, and listening comprehension skills but also strengthens learners' motivation to study the language. Moreover, participation in online tests, quizzes, competitions, video conferences, and communication with peers from other countries creates learning conditions that closely resemble an authentic language environment.

In English language teaching, the communicative approach is closely linked with interactive technologies. This approach views language learning as the acquisition of language for real communication and contributes to the development of intercultural competence. Communication processes organized in the online environment enhance learners' abilities to exchange ideas, engage in discussions, and make independent decisions. Through communicative tasks, students do not rely on ready-made patterns but independently select appropriate linguistic units to express their own ideas.

The project method plays a particularly important role in implementing learner-centered education. In English language classes, project-based activities develop learners' reading, writing, listening, and speaking skills in an integrated manner. The process of working on projects teaches students to collaborate, work in teams, analyze information, and present their findings. This approach not only reinforces knowledge but also fosters important personal qualities such as responsibility, mutual support, and creativity.

Collaborative learning technology is also considered one of the most effective forms of interactive instruction. When working in small groups, each student is responsible for the overall outcome, which promotes mutual assistance between stronger and less proficient learners. This, in turn, helps to eliminate learning gaps and increases the overall effectiveness of instruction. The application of interactive pedagogical technologies in English language teaching enhances the efficiency of the educational process, develops learners' communicative competence, and prepares them for real-life communication. These technologies, based on the principles of humanism, activity, and creativity, represent an essential component of modern English language education.

**Conclusion**

The analysis demonstrates that the effective integration of interactive pedagogical technologies in English language teaching significantly enhances the quality of the educational process. Interactive methods foster learners' communicative competence, critical and creative thinking, and active participation in classroom activities. By shifting the focus from teacher-centered instruction to learner-centered approaches, interactive methodologies create a supportive learning environment in which students actively construct knowledge through collaboration, communication, and problem-solving.

The use of information and communication technologies, Internet resources, project-based learning, and cooperative learning strategies enables the development of language skills in an integrated and authentic manner. These approaches not only improve learners' linguistic proficiency but also increase their motivation and readiness for real-life communication. The findings confirm that interactive pedagogical technologies are a key factor in aligning English language education with contemporary educational standards and global demands.

**Recommendations**

Based on the findings of the study, it is recommended to systematically integrate interactive methods into English language curricula at all levels of education. Teachers should be provided with continuous professional development opportunities aimed at enhancing their competence in applying interactive and digital teaching technologies. Particular attention should be paid to the use of project-based learning and collaborative tasks that promote learner autonomy and teamwork.

Furthermore, educational institutions should ensure adequate technological infrastructure and access to digital resources to support interactive learning environments. It is also advisable to incorporate authentic materials and online communication platforms to strengthen learners' intercultural competence. Future research may focus on empirical studies assessing the long-term impact of interactive methodologies on learners' academic achievement and communicative performance in English.
